

Digitized Supply Chains - Global Logistics & Transportation

Overview:

A supply chain tracking solution is required that will help Global Logistics & Transportation institutions in digitizing their paper trails, improving consignment tracking while reducing processing time and operational costs of transferring goods globally for businesses and consumers.

Current Challenges:

- Transport operations remains highly dependent on a flood of paper trails that is never digitized
- Logistics information passes through many hands, increasing potential for delays in transport
- Each consignment can require sign-off from multiple stakeholders in multiple organizations globally, one lost form or late approval could leave the consignment stuck in a port/hangar/warehouse. The entire process can take weeks or even a month

Business Requirements

- All parties have end-to-end visibility of the consignment's progress through the supply chain
- Reduce or eliminate fraud, pilferage and errors
- Improve inventory management (Pharma Cold Chain etc.)
- Improve warehouse/port/hangar operational efficiency
- Minimize courier costs
- Optimize associated Business Processes
- Reduce delays from paperwork & Reduce waste
- Identify potential issues faster
